

Orbit Bridge Anti-Phishing Guide

1 Set Anti-phishing

Orbit Bridge: Fast and secure way for token conversion
Convert your mainnet tokens to another mainnet.

The screenshot shows the Orbit Bridge conversion interface with a numbered list of steps 1-4 on the left side:

1. Select a token to convert (highlighted in green)
2. Select FROM and TO networks (highlighted in blue)
3. Enter conversion amount (highlighted in green)
4. Enter recipient address (highlighted in blue)

The interface includes sections for ASSET, FROM/TO networks, CONVERSION AMOUNT, and RECIPIENT ADDRESS, with a CONVERT NOW button at the bottom.

1. Click “Set Anti-phishing” at the top right side of the website.

2 Register Personalized Image

Orbit Bridge: Fast and secure way for token conversion
Convert your mainnet tokens to another mainnet.

The screenshot shows the Orbit Bridge interface with a modal window titled "ozys Registering Personalized Image". The modal contains the following elements:

- Header:** "ozys Registering Personalized Image" with a close button (X).
- Section:** "What is Phishing?"
- Image:** A screenshot of the Orbit Bridge interface showing a phishing attempt with a "SAFE1" logo and a "Convert your mainnet tokens to another mainnet" message.
- Text:** "In many cases, phishing is a fraudulent practice of stealing user information and assets by luring users to fake websites that are similar to the ones they are trying to access."
- Section:** "Registering personalized images to prevent phishing"
- Form:** A circular image selection area with a "SAFE1" logo and a text input field for "Input personal recognition character".
- Button:** A teal "Continue" button at the bottom, highlighted with a red box.

STEP 2-1. After reading the personalized image registration guide, click the "Continue" button.

2 Register Personalized Image

Orbit Bridge: Fast and secure way for token conversion
Convert your mainnet tokens to another mainnet.

The screenshot shows the 'ozys Registering Personalized Image' dialog box in two stages. The first dialog (left) has a red box around 'Step 1. Select personalized image' and 'Step 2. Select image color'. The second dialog (right) has a red box around 'Step 3. Input Personal Recognition Character' and 'My Final Personalized Image'. A red arrow points from the first dialog to the second. The background shows a dark interface with a vertical step indicator (1-4) on the left.

STEP 2-2. Enter three pieces of information: Image, color, personal recognition characters. Then click "Register Personalized Image".

2 Register Personalized Image

ozys Registering Personalized Image

Registration successful

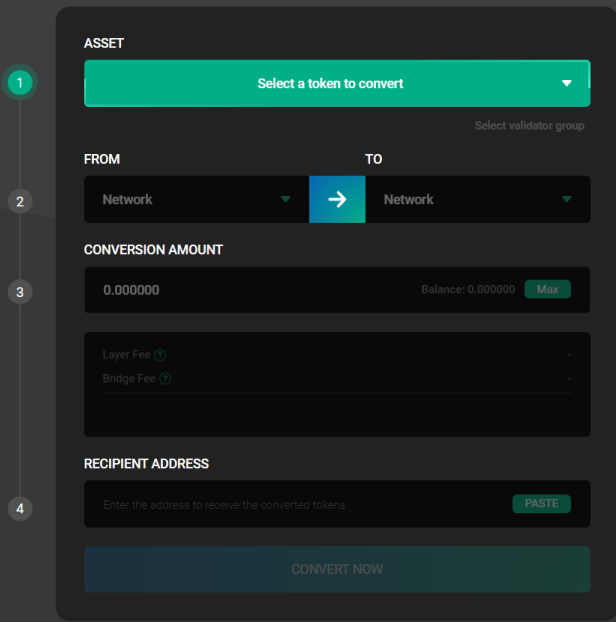

- Registration or verification of a personalized image **does not require connecting the wallet**, and the image isn't stored on either the service site or the remote server but is applied browser by browser. Hence, **clearing users' browser cache/data or using incognito mode may result in the reset of your personalized image**. In the case that the registered personalized image isn't displayed despite there being any such reason, a phishing attack could occur. Therefore, it is recommended that you double-check the site link, register users' personalized images, and use the site when the personalized image appears.
- Personalized images registered by the user can be found at the top of the site. In the event that registered personalized images don't appear on the

Confirm

STEP 2-3. Please check the notes and click "Confirm".

3 Check the personalized image

Orbit Bridge: Fast and secure way for token conversion
